

Four-Position Tilt Accessory

For Conformal Coating Applicators

Features and Benefits:

- Coating access in four tilt positions
- Software controlled
- Easy to retrofit on existing systems
- Available for the SC-300 and SC-400 applicators

The Nordson ASYMTEK Four-Position Tilt accessory enables the SC-300 Swirl Coat and SC-400 PreciseCoat Jet applicators to coat four sides of a part or other areas not accessible from the standard vertical approach. It is ideal for coating component sides or underneath components on a printed circuit board. The mechanism can be tilted 30 degrees from vertical position to the left, right, front or back.

The Four-Position Tilt accessory mounts directly into the z-head of the conformal coating platform. The applicator then mounts onto the Tilt accessory. A pressure regulator and flow control fittings complete the set-up. Software reconfiguration to the new accessory is performed easily. The new coating tool is available and ready for use in minutes.

Specifications: Four-Position Tilt Accessory
